

CL-Cow Replacer

CL-Cow Replacer is a colostrum-based milk replacer designed to be used along with colostrum from the cow. It is often used by beef producers when the calf is weak or cold, giving the calf energy so it can get up and nurse.

Features & Benefits

- Colostrum based milk replacer
- Day one nutrition for newborn calves.
- Complete with vitamins, trace minerals, calcium and phosphorus.
- pH adjusted to discourage scours.
- Easy to mix in lukewarm water.
- A source of live, naturally occurring microorganisms.
- Administer orally by bottle, drench, or use esophageal feeder.
- Give to cold, weak or lethargic calves.
- Decreased medication costs.
- Decreased morbidity and mortality.
- Very cost effective.
- More calves raised to weaning.
- Improved overall herd management.

Overview

CL-Cow Replacer is day one nutrition for newborn calves. It is designed to help the producer get 100 grams of globulin proteins into their calves as soon after birth as possible. It contains not only the necessary IgGs, but is also complete with vitamins, trace minerals, calcium, phosphorus and live (viable) naturally occurring microorganisms needed by newborns to get the proper start to their lives. If calves are cold, weak or lethargic, give them a dose of CL-Cow Replacer to help them get the energy they require to get up and nurse. Users have reported that CL-Cow Replacer has been a life saver for many of their newborn calves.
