

Probiotic 512 Titger Paste

Probiotic 512 Titger Paste should be used at birth and any time an animal goes off feed, especially after drug treatment, as this will help to balance the intestine's microflora. It also should be given to help reduce the reoccurrence of health problems in any age animal.

Features & Benefits

- A source of live, naturally occurring microorganisms
- Biological components are all natural.
- No withdrawal and can repeat as often as necessary.
- Dried Egg Solid.
- Helps balance the intestine's microflora.
- Increases calf's desire to eat.
- Decreased medication costs, morbidity, and mortality.
- Product designed to work on all ruminants.
- Especially valuable to be given after drug treatment.

Overview

Probiotic 512 Titger Paste is a combination of biological components that have a symbiotic relationship with the gut microflora. Cuprem, Inc. has made a probiotic paste for nearly 30 years. Probiotic 512 Titger Paste is the result of years of research and trials. It comes in three sizes for your convenience. It helps establish a healthy gut microflora and helps to prevent disease. A healthy gut is one of the first defences against pathogens. Probiotic 512 Titger Paste does just that. It provides ingredients and probiotics to help strengthen and fortify the gut. Probiotic 512 Titger Paste is not needed if you are already using one of our capsule products, it is just as effective as the capsules, but some find it easier and more convenient to use a paste.
