

Rapid Rumen Factors

Rapid Rumen Factors help cattle that have stopped eating regain their appetite. It helps to restore a healthy gut microflora and normal pH level in the stomach naturally, without any withdrawal time.

Features & Benefits

- A source of live, naturally occurring microorganisms.
- Energy source for weak, cold, or sick animals.
- Contains both prebiotics and probiotics.
- Contains enzymes to ease digestion.
- Includes multivitamins and trace minerals.
- pH adjusted for more natural environment for microorganisms.
- Improves appetite.
- Use anytime animal shows signs of going off feed.
- Decreases morbidity and mortality.
- An important product to have on hand for animals of all ages.

Overview

Rapid Rumen Factors is designed to help cattle that have stopped eating so they don't end up dying and costing your operation money. Cattle stop eating for several different reasons, but the result on their stomach is the same. First, the pH changes, then the healthy microorganisms die off making their stomach ineffective at digesting what little food they may be eating. Rapid Rumen Factors is designed to address and help all these factors. First, it brings the pH of the stomach to a more normal level. Second, it contains a source of live (viable) naturally occurring microorganisms and a food supply to help them survive and multiply on their own. Once a normal, healthy, stomach is reestablished most cattle will begin eating again. Rapid Rumen Factors is not a drug. What caused the cow to stop eating needs to be treated by your veterinarian for Rapid Rumen Factors to work effectively. Users have reported that Rapid Rumen Factors has shortened the time frame in which they need to use drugs and decreased recovery time.
