- Includes multivitamins and trace minerals.
- Ph adjusted for more natural environment for microorganisms.
- In most cases restarts appetite
- Use anytime animal stops eating.
- Decreases morbidity and mortality.
- An important product to have on hand for animals of all ages.

Overview

Rapid Rumen Factors is designed to help cattle that have just stopped eating so they don't end up dying and costing your operation lots of money. Cattle stop eating for several different reasons, but what happens to their stomach is the same. First, the pH changes, then the healthy microorganisms die off making their stomach ineffective at digesting what little food it may be eating. Rapid Rumen Factors is designed to address and help all these factors. First, it brings the pH of the stomach to a more normal level. Second, it contains a source of live (viable) naturally occurring microorganisms and a food supply to help them survive and multiply on their own. Once a normal, healthy stomach is reestablished most cattle will begin eating again. Rapid Rumen Factors is not a drug. What caused the cow to stop eating needs to be treated by your veterinarian for Rapid Rumen Factors to work effectively. Users have reported that Rapid Rumen Factors has shortened the time frame in which they need to use drugs and decreased recovery time.
