

Surelife W/S

Surelife W/S is a leading scour product designed to provide a complete reduced nutritional feeding, and to provide much needed electrolytes to maintain body fluids. It not only saves money, but saves lives of many calves that otherwise wouldn't make it.

Features & Benefits

- Helps to firm up looseness caused by scours.
- Gives medication a chance to work.
- Saves not only money, but lives.
- Replenishes electrolytes that can be lost due to scours.
- Helps to prevent dehydration.

Overview

Surelife W/S contains a thickener that helps slow down bowel movements. This gives medication a chance to work. Surelife W/S maintains the animal's stomach microflora, helping to maintain its appetite during the disease challenge and drug treatment. Surelife W/S is used in place of the cow's milk or milk replacer. If given at the first sign of scours, along with your normal veterinarian-recommended treatment, Surelife W/S may be all that you'll need. Surelife W/S is to be fed as you would with a normal milk replacer, however, if the animal is exceptionally loose, you may want to repeat twice as often as you would normally. Surelife W/S has been tried and tested by many farmers and ranchers. It is a product that works. It saves not only money, but lives. Surelife W/S maintains an animal's appetite, hydration and firms up loose stools. Our users report that they keep more scouring animals alive by using Surelife W/S. It has been referred to by our customers as the resurrection product. They have saved animals that, previous to using Surelife W/S, would have died. Surelife W/S is an unequalled product that works.
