

# Surelife W/S

Surelife W/S is a leading scour product designed to provide a complete reduced nutritional feeding, and to provide much needed electrolytes to maintain body fluids. It not only saves money, but saves lives of many kids that normally wouldn't make it.

## Features & Benefits

- Helps to firm up looseness caused by scours.
- Gives medication a chance to work.
- Saves not only money, but lives.
- Replenishes electrolytes that can be lost due to scours.
- Helps to prevent dehydration.

## Overview

Surelife W/S contains a thickener that helps slow down bowel movements. This gives medication a chance to work. Surelife W/S maintains the animal's stomach microflora, helping to maintain its appetite during the disease challenge and drug treatment. Surelife W/S is used in place of the sheep's milk or milk replacer. If given at the first sign of scours, along with your normal veterinarian-recommended treatment, Surelife W/S may be all that you'll need. Surelife W/S is to be fed as you would with a normal milk replacer, however, if the animal is exceptionally loose, you may want to repeat twice as often as you would normally feed. Surelife W/S has been tried and tested by many farmers and ranchers. It is a product that works. It saves not only money, but lives. Surelife W/S maintains an animal's appetite, hydration and firms up loose stools. Our users report that they keep more scouring animals alive by using Surelife W/S. Surelife W/S has been referred to by our customers as the resurrection product. They have saved animals that, previous to their using Surelife W/S, would have died. Surelife W/S is an unequalled product that works.
