

CL-Sow Replacer

CL-Sow Replacer is a colostrum-based milk replacer designed to be used along with colostrum from the sow.

Features & Benefits

- A Colostrum-based milk replacer in pigs.
- A supplement to sow's milk during the first few days of life.
- Easy to mix - may be used with medications.
- High in milk protein and energy.
- A source of live, naturally occurring microorganisms.
- Increased gains at weaning.
- Decreases medication costs.
- Decreases morbidity and mortality.
- Helps to balance the intestine's microflora.

Overview

CL-Sow is fortified with live microbial cultures designed for piglets. It also contains sources of Vitamin A, D, E and C, as well as all the necessary minerals a newborn pig needs. CL-Sow Replacer can be used on newborns who receive an inadequate supply of colostrum from their mother as a one-time supplement, or it can be used as a complete nutrition and lactobacillus replacement on orphan piglets. It works well on cold, weak or lethargic pigs, giving them the energy and strength they need to survive. The colostrum in CL-Sow Replacer provides a temporary barrier from disease and other challenges until the piglet's immune system fully develops and can protect the piglet on its own. When a piglet is born, it only has 30 percent of its immune system functioning, and normal development of a complete immune system can take two weeks.
