

# K-Nine Puppy CL Milk

K-Nine Puppy CL Milk is designed to provide newborn puppies with the nutrition that they would typically received from their mother's milk.

## Features & Benefits

- Puppies should have colostrum from their mother if possible.
- Use to supplement bitches milk or regular puppy food.
- Mixes easy in lukewarm water (110 degrees Fahrenheit).
- High quality puppy's milk replacer.
- All milk protein.
- Reduces digestive problems.
- Decreases morbidity and mortality.
- Cost effective.
- May be used as a supplement on older dogs that have trouble digesting their food.

## Overview

K-Nine Puppy CL Milk is a nutritionally complete colostrum based milk replacer that can be used in many different situations. It is designed to be used as either a supplement to the mother's milk when there just isn't enough milk or milk replacer for orphan puppies. Our Puppy Milk Formula uses a highly digestible source of dried colostrum and milk replacer. It helps the puppies to fully utilize the milk and provides improved growth factors, which helps stimulate protein synthesis, improve fat utilization and promote cell growth. **USAGE:** Weight the puppy. Puppy should be fed at least 1/2 oz. of water for every 2 oz. of puppy weight daily. Puppies should be allowed to consume as much as they want. **MIXING DIRECTIONS:** Mix 1 measure of powder with 2 measures of water for the first 7 days. Mix 2 measures of powder with 3 measures of water for older puppies.
