# Somatic 10G

Somatic 10G is one of our oldest time-proven products for high somatic cell count. It has been around nearly 40 years and most of our first customers have never stopped using it. Ingredients in Somatic 10G will help to lower somatic cell count on every cow, regardless of her current count. Somatic 10G has proven itself time and time again to Dairymen across the country as an all-natural, safe and effective product.

## Features & Benefits

- Decreases cell count.
- Increases milk production.
- Improves feed conversion.
- Helps to lower cost of milk production.
- A source of live (viable), naturally occurring microorganisms.
- An easy way to help with hoof problems.
- Combination of vitamins and trace minerals.
- Combination of enzymes for better feed conversion.
- Combination of microorganisms for better appetite.
- Does not replace any ingredient in a balanced dairy ration.

## Overview

Somatic 10G is not a treatment, but when used continually, it works with the cow's own ability to fight infections that can raise somatic cell count. Somatic cell count is a challenge because so many things can affect somatic cell count. Cuprem's approach to controlling somatic cell count is to help the cow in as many ways as we can to maintain optimal health so she has a better chance of warding off infections. When the herd average is below 700,000, Somatic 10G should lower the count below 300,000 within a 120-day time period. Whenever high somatic cell count is a problem, milking machines and sanitation procedures should be checked. This is not only important, it is a must. What do we mean when we say Somatic 10G is designed for better health? When fed continuously, you should notice brighter eye and skin condition, less hock problems, better feed conversion, fewer breeding problems and more milk - simply a healthier cow.
